

# DNA Resource, LLC

DNA Resource, a subsidiary of DNA Group, is a demand driven sourcing activity supporting OEM procurement of specialized components. DNA Group has over 20 years of experience successfully navigating the global marketplace sourcing competitively priced and hard to find components.

Specializing in electromechanical and electronic components, DNA Resource's list of sourced products available includes (but is not limited to):

- cords, cables and wire harnesses for power, data and wireless applications
- metal and dies cast parts including MIM (metal injection molding) and NMT (the integration of metal resin) technology parts
- plastic and rubber products utilizing double injection, TPE (thermal plastic elastomer) and IMD (in mold decoration) technologies
- connector products including board to board, wire to board and fine pitch connectors; water proof assemblies and variety of adapters.

Turn to DNA Resource for almost any component needed for the complete build of an OEM product.
